

Year 2

This half term Year 2 will be covering the topic of transport. In Design and Technology we will be looking at vehicles and mechanisms such as wheels and axles. The children will design and then assemble their own vehicle using various materials. In science we will be looking at the electricity and the essential role it plays in everyday life. The children will explore and test circuits and be introduced to the hazards associated with mains electricity. Our history topic is looking at seaside holidays in the past. We will look at how holidays have changed by examining different sources of information. We will link our ICT topic of routes with numeracy by instructing a floor turtle to move around an area by using directional vocabulary. Our literacy lesson will focus on writing such as non-chronological reports and traditional stories.
